Our commitment to the community extends beyond simply offering financial services. We are committed to helping people evaluate their financial situations and giving them tools to help them make informed decisions.

As part of that commitment, we use seminars like this one to provide individuals with sound financial information. In this particular seminar, we'll discuss some techniques that might help you pursue your financial goals in retirement.

We hope that after attending this two-session seminar, you'll want to meet with us in our office. This is a complimentary consultation that we offer to everyone who attends our seminars. During that meeting, we can discuss any questions you have as a result of what we discuss here. If you prefer, we can use that time to examine your specific situation and begin the process of helping you formulate a financial strategy that will suit your needs.

We've found that people are more likely to remember something they act on rather than something they only hear about. That's why we designed this workbook so you can apply what you learn to your situation. In it you'll find helpful material that reinforces the seminar's major points and will be a valuable resource for you. Second, if you check "No, I am not interested in scheduling an appointment at this time," we won't call you directly after the seminar.

In exchange for these two promises to you, please promise that you will fill out this form. Many of our seminar attendees do come in for a consultation, so we've set aside time just to meet with you.

When you do come to our office, feel free to leave your checkbook at home. I'm very interested in developing working relationships with many of you, but that decision is yours.

Now that the housekeeping is out of the way, let's kick off this session with a question.

Are you prepared for
one of the biggest
transitions in your life?

Are you prepared for one of the biggest, if not THE biggest, transitions in your life?

Retirement is usually seen as life's reward for working hard, supporting a family, and saving your hard-earned dollars. You celebrate with a big party and then move into this exciting, new life stage. Is that how you envision it?

In the past, retirement often meant switching from a paycheck to a pension check, contacting Social Security to get benefits in motion, and maybe supplementing that income with the proceeds from downsizing a home or renting a property.

But times have changed. Retirement can now mean piecing together a big puzzle, composed of a variety of different resources, to ensure you have enough to live on — and maybe have something left to pass on to heirs if that's one of your goals.

So let's think about that for a minute. *[Pause for emphasis.]*

Do you have the **time**...

...the **desire**...

...and most important,
the **knowledge**...

...to build a financial strategy
for retirement?

<CLICK> Do you believe you have the time, <CLICK> the desire, and maybe most important, <CLICK> the *knowledge* <CLICK> to build a financial strategy that will help you live comfortably for what could be *decades*?

Maybe; then again, maybe not. That's why we're all here today: to arm you with the information you need to plan for a comfortable retirement.

Four Pillars of a Successful Retirement (that is, four *really* important factors)

1. Social Security
2. Income Strategy
3. Tax Planning
4. Legacy Planning

Putting together a successful financial strategy for retirement takes very careful thought. Four factors, in particular, could affect your retirement lifestyle:

1. **<CLICK>** Social Security, which isn't as straightforward as many people think; you'll need to carefully decide when and how to tap your Social Security benefits
2. **<CLICK>** Developing an income strategy that, first and most important, covers your everyday expenses and basic needs; second, funds your "wants"; and third, still leaves as much room as possible for "surprises" such as unexpected medical costs that may crop up
3. **<CLICK>** Tax planning, or making sure Uncle Sam doesn't get more than his fair share
4. **<CLICK>** And finally, planning for your later years and beyond, especially if one of your objectives is to leave a legacy

Although we're calling these Four Pillars of a Successful Retirement, keep in mind that no strategy can truly guarantee 100% financial success. However, understanding a little more about the nuances within each of these pillars, and how they relate to each other, can help you become better prepared for what lies ahead.

Three Risks

(also known as external factors over which you have little control)

1. Inflation (cost of living)
2. Health-care costs
3. Market unpredictability

Before we get into the details of the four pillars, it might be helpful to understand three risks (clearly, we like numbers!) that can derail even the most well-thought-out financial plan. These could also be known as “external factors over which you have little control.”

They are:

1. <CLICK> Inflation, or the rising cost of living
2. <CLICK> Health-care costs
3. <CLICK> Unpredictability of the financial markets

Your ability to live the retirement lifestyle you want — and deserve — may depend on how well you’re able to prepare for and manage these risks.

Let’s take a closer look at each one.

Inflation: Rising prices over time

Cost of a bag of groceries at a 3% annual inflation rate

This hypothetical example of mathematical principles is used for illustrative purposes only. Actual results will vary.

First, inflation.

Inflation is the rise in consumer prices over time. It has an effect on everything from the cost of a car and a home, to energy prices, to a bag of groceries. Whether you realize it or not, you've been battling inflation throughout your working years. It could be even harder to deal with in retirement when you're on a fixed income.

Consider the example shown here. At just a 3% inflation rate, which is the approximate average over the past century according to the U.S. Bureau of Labor Statistics, the cost of a \$50 bag of groceries will more than double in 30 years.

This hypothetical example of mathematical principles is used for illustrative purposes only. Actual results will vary.

Inflation: Your money also loses purchasing power over time

Effect of 3% annual inflation on a \$1 million nest egg

This hypothetical example of mathematical principles is used for illustrative purposes only. Actual results will vary.

Inflation is the reason your money loses its purchasing power over time.

In 30 years, assuming 3% annual inflation, a \$1 million nest egg would have the purchasing power of just a little more than \$400,000.

That's why it's critical for your retirement portfolio to at least keep pace with (or ideally exceed) inflation to avoid losing purchasing power as the years go by.

This hypothetical example of mathematical principles is used for illustrative purposes only. Actual results will vary.

Why Inflation Really Matters

At age 65, a healthy individual could expect to spend 20 or more years in retirement

Source: Social Security Administration, 2019

This might be the most important reason yet why inflation matters: You could have a good chance of living a retirement that lasts 20 years or longer. And you don't want to run out of money before you run out of time.

Of course, inflation isn't the only factor to consider. So that brings us to our second risk: health-care costs.

Rising Costs of Health Care

Sixty-five-year-olds who retired in 2019 might need these amounts to cover their health expenses in retirement

Source: Employee Benefit Research Institute, 2019

Many people underestimate the potential cost of health care in retirement, forgetting the premiums, copays, deductibles, and prescription drugs they might have to cover — even with Medicare, which typically covers approximately 60% of the average retiree's health-care costs.

How much could you spend on health care in retirement?

If Medicare benefits remain unchanged, it's estimated that a 65-year-old married couple might need \$301,000 to cover health care alone. This slide also shows how much a single man and woman might need.

Consider that medical costs could be even higher for those with chronic illnesses or high prescription drug costs. And other costs, such as dental expenses, glasses, and hearing aids for those who need them, aren't captured in these figures.

Long-Term Care

- More than half of people will need some form of long-term care after age 65
- Current average cost of a one-year stay in a nursing home (semi-private room): **\$82,125**
- Cost in 20 years at just a 3% inflation rate: **\$148,327**

Source: U.S. Department of Health and Human Services, 2019. Cost projection is a hypothetical example of mathematical principles and is used for illustrative purposes only. Actual results will vary.

Another health-related cost many retirees eventually face is the need for long-term care.

Long-term care refers to the assistance needed to manage a chronic illness, disability, or cognitive impairment that leaves you unable to care for yourself for an extended period of time. It includes nursing home care, as well as care provided in an assisted-living facility, adult day-care center, or even at home.

The statistics surrounding long-term care can be scary. Consider:

- More than half of people over age 65 will need some form of long-term care during their lifetimes.
- Currently, the average annual cost of a semi-private room in a nursing home is \$82,125, and in many states the actual cost is much higher.
- If costs rise at just 3% a year (a conservative estimate), a one-year stay in a nursing home would top \$148,327 in 20 years.

Unfortunately, Medicare and traditional medical insurance offer little or no relief for this type of care. And if you qualify for Medicaid by spending down your assets, it typically means you lose some control over where you receive care and, subsequently, the type of care offered.

Okay, so now that I *really* have your attention, let's look at yet another financial challenge you will likely face.

Unpredictability of the Financial Markets

Source: Refinitiv, 2020, for the periods 1/1/1995 to 12/31/1999, 1/1/2005 to 12/31/2009, and 1/1/2015 to 12/31/2019. The S&P 500 composite index total return is generally considered representative of U.S. stocks. The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index. Rates of return will vary over time, particularly for long-term investments. Past performance is not a guarantee of future results. Actual results will vary.

The third and final risk we'll mention is the unpredictability of the financial markets.

It's a hard truth of investing: The financial markets change, often unexpectedly and sometimes dramatically. Generally, it's a case of *when* and not *if* it happens.

And *if* it happens *when* you're about to retire, or when you're in the midst of drawing on your retirement investments for income, it can be unsettling to say the least.

Consider these outcomes, which show the cumulative returns of the S&P 500 composite stock index over three different five-year periods: 1995 to 1999, 2005 to 2009, and 2015 to 2019. (*The cumulative return looks at the total percentage increase or decrease in the value of an investment over a specific time period.*)

As you can see, these three time periods produced vastly different results. Although the cumulative returns for two of these periods were very high, the five-year period from 2005 through 2009 had a much lower 2.11% cumulative return.

Let's look at an extreme example — a moment in time — showing how this can affect an investment portfolio.

Source: Refinitiv, 2020, for the periods January 1, 1995, to December 31, 1999; January 1, 2005, to December 31, 2009; and January 1, 2015, to December 31, 2019. The S&P 500 composite index total return is generally considered representative of U.S. stocks. The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index. Rates of return will vary over time, particularly for long-term investments. Past performance is not a guarantee of future results. Actual results will vary.

Bear Market Retiree

Steven's Portfolio

Original \$500,000 tax-deferred retirement portfolio

50% stocks and 50% bonds

\$40,000 inflation-adjusted annual withdrawals

Source: Refinitiv, 2020. This hypothetical example is used for illustrative purposes only and does not reflect any specific investment. Past performance is not a guarantee of future results.

Steven, who retired in 1976, unfortunately experienced a bear market environment — a period during which the value of the market consistently fell.

By 1988, Steven's portfolio had lost two-thirds of its value, largely as a result of declining stock prices and high inflation.

Now consider if you were about to retire or in retirement during a period of declining prices. Would you be concerned? *[Pause for emphasis.]*

If so, take heart — because now it's time to roll up our sleeves and shift gears a bit. But we'll keep the three risks we discussed — inflation, health-care costs, and market unpredictability — in the back of our minds for the duration of this presentation. We'll point out how they fit in along the way.

Source: Refinitiv, 2020, for the period January 1, 1976, to December 31, 1988. This hypothetical example is used for illustrative purposes only and does not reflect any specific investment. The original \$500,000 portfolio held 50% stocks and 50% bonds in tax-deferred accounts. In the first year, \$40,000 was withdrawn for income, and in subsequent years an inflation-adjusted equal amount was withdrawn. Stocks are represented by the Standard & Poor's 500 composite total return, which is generally considered representative of the U.S. stock market. Bonds are represented by the Citigroup Corporate Bond Composite Index, which is generally considered representative of the corporate bond market. The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index. Past performance is not a guarantee of future results. Rates of return will vary over time, particularly for long-term investments.

			
Social Security	Income Strategy	Tax Planning	Legacy Planning

Four Pillars of a Successful Retirement

Now let's turn our attention back to our main topic: Four Pillars of a Successful Retirement. Throughout the presentation, we will walk through an in-depth examination of each pillar.

To recap, the four pillars are Social Security, developing an income strategy, tax planning, and legacy planning. We'll focus on the first two pillars during the first session, and the next two pillars during the second session.

First up: Social Security.

Let's dive into the first of the four pillars — Social Security. We're going to discuss basic elements of the Social Security program and focus on filing strategies that might increase the lifetime benefits you could receive.

Keep in mind that there are many combinations for how a married couple can claim Social Security retirement benefits and spousal benefits, as well as other filing strategies. In fact, according to the Social Security Administration, the claiming-age combinations that married couples might choose range from nearly 10,000 to 40,000, depending on their respective birth years. We won't get that detailed today, but we will discuss benefit-enhancement strategies and some common pitfalls to avoid.
